## The Smart CMS System

### Benefits of Content Managed Website

If you require adding some contents, links, images or modify the existing contents in your website directly from your desktop, Content Managed Website is the best option for you. You have the option to update the contents of your website frequently without being dependent on the web developers. Through this powerful tool you are always ready to communicate your new hot products, services and views to your customers instantly.

### What is a Content Management System or CMS?

Content Management System enables you to update your website contents very quickly. You can access your web contents from any location and update directly from your desktop or laptop. This provides you the easiest method to implement your website contents growing and keeping up-to-date. Multiple authors can access the site with secure authentication method and add contents to update from different locations.

### Access from anywhere

The CMS website can be access from any computer having internet connection with secure login. This enables the user to conveniently and quickly manage contents from any location. This especially helps authors, editors, professionals to add contents to the website from any place.

### Website Management Control Panel

The CMS Control Panel enables you to login securely and gaining access to the contents and articles to your website. You just need to select the articles to be edited or add new articles to the contents of the website and update it. Though the Control Panel, you can control all the images, banners, links very conveniently.

### Database driven website

The CMS website is database driven and allows you to create and store hundreds or thousands of pages in the database without the need to update each one of them.

### Saves time

CMS website lets you update the contents very quickly from anywhere while in static websites you need to download and then upload the pages which also requires some technical skills and takes time.

### CMS site Attracts visitors

CMS site is dynamic and keeps updating frequently with latest updates; this attracts visitors to visit your website frequently. It not only generates pages that are search engine friendly but can produce lots of links from the new contents that is added and syndicated. Apart from these benefits, you can make your web contents time sensitive. You can set you specific web contents not to be displayed at some specific date and time. The CMS also helps optimize your web contents for Search Engines to reach you site to millions of people across the globe.

### Upgrade your Existing Website to DynamicSite

Get your existing website upgraded to DynamicSite. All the design and content of your existing website will be same. We will provide you with a Control Panel which let you update the content of your web pages.

### How this System Works?

We will program your website to make it Dynamic and create a database for the contents of your website. A Control Panel will be provided to you where you log in and access the content of the page to be edited. Just edit your content / images / links / documents and save it. All the updated content will be reflecting on the site immediately.

### Secure System

The System is quite secure as you need a Username, Password and a Key to login to your website.

### Customization As Per Your Requirements

Your Dynamic Site will be customized as per your exact requirements if requested.
